

Reports — screen design

The daily artifact: what the machine did on a given day, who was responsible, what was unusual, and a one-click export. Built on the locked ZenVizor surface — FluentWindow + Mica, the canonical metal-card recipe, the violet/teal data series, and the Alerts severity vocabulary. No new tokens.

The system I committed to

Composition (Q1c): a narrative "today's story" — the day's totals and what was notable lead as the headline; ranking and discovery sit below as supporting evidence.

Temporal (Q2b): single day with a comparison anchor selectable over a specific date, 7-day, 30-day, or 90-day average (default 7-day) so the hero carries deltas without an arbitrary single-day baseline.

Hero (Q3b): headline total-bytes (`text.title.large`), Up/Down split with deltas, a static day-shape sparkline with a peak marker, and a two-segment WAN/Local bar.

Surfaces: Top Apps as a compact `DataGrid` (Q4a), Uncommon Talkers as category-grouped cards (Q5b), Notable as severity-grouped sections (Q7a).

Durable locks honored

- Page margin `space.24` ; every data card on the metal-card recipe.
- Single **Export** menu → CSV + HTML (no PDF, no email).
- Top Apps is the only ranking override; Uncommon Talkers is **not** byte-rank capped.
- Notable items are read-only items, not grid rows — no Acknowledge here.
- Every app row drills to History pre-filtered to `(app, date)` .
- Passive-only; no block / kill / quarantine anywhere.

Functional layout — state: default

The full Phase 5 composition for a populated day, shown at real app scale with the window grown to its content height so every surface is auditable in one frame. The Export flyout is open; drill affordances are shown on one Top Apps row and one Uncommon Talkers row. scroll: page.

TOKEN ANNOTATIONS

page · margin	Outer content padding <code>space.24</code> (24px). Page scrolls as a whole — <code>scroll: page</code> .
title	Reports = <code>text.subtitle</code> ; orientation line <code>text.caption</code> / <code>text.secondary</code> .
date control	<code>CalendarDatePicker</code> pair (Q2b): primary date + comparison anchor. Default = yesterday; today locked. <code>radius.control</code> .
export	Single <code>ui:Button</code> + <code>ui:MenuFlyout</code> (CSV/HTML). Accent fill = <code>accent.fill</code> on <code>accent.grad</code> ; flyout <code>surface.layer</code> / <code>radius.overlay</code> .
all cards	<code>metal.card</code> + <code>edge.light</code> + <code>border.card</code> + <code>shadow.card</code> + <code>radius.card</code> .
hero numbers	All byte values <code>text.mono</code> . Deltas vs comparison anchor: more-upload neutral <code>status.neutral</code> , less-download <code>status.success</code> .
WAN / Local	Two <code><Border></code> s filled <code>chart.wan</code> / <code>chart.local</code> , widths bound to proportion. NOT a <code>CartesianChart</code> .
day sparkline	<code>lvc:CartesianChart</code> , static, no legend/tooltip; stroke <code>chart.downSeries</code> ; labels <code>chart.axis.label</code> . Theme-repaint via <code>ChartTheming</code> .
drill	Both surfaces: hover chevron + hand cursor + single click → History (<code>app</code> , <code>date</code>). Passive.
status bar	Bottom-bar rate mirror is <code>MainWindow</code> chrome (live), intentionally disjoint from the historical date. <code>chrome: MainWindow</code> , not <code>ReportsPage</code> .

State coverage

Every state in the matrix at the fixed 1180×760 window so scroll clipping reads truthfully. Disconnected and error retain last-known values at 60% opacity (history-class surface) and disable Export.

state: empty — zero traffic No data for date

TOKEN ANNOTATIONS

Page-level empty state, text.body / text.secondary, centered. Date control stays; Export disabled.

7-day average

Jun 1 – Jun 7

30-day average

May 9 – Jun 7

90-day average

Mar 10 – Jun 7

TOKEN ANNOTATIONS

- primary date

CalendarDatePicker. Default = yesterday; today is locked (incomplete). radius.control.
- anchor

A dropdown over Date / 7-day / 30-day / 90-day — same shorthand shape as Per-App and History. Default **7-day average**, which reads less arbitrarily than a single prior day.
- deltas

The hero deltas + "vs 7-day avg" caption resolve against whichever anchor is selected.
- contract

Implies GetReport(date, anchor) where anchor ∈ {date, 7d, 30d, 90d}. Provisional, locks at Phase 5.

TOKEN ANNOTATIONS

total size

Headline total is text.title.large (40px) mono — the canonical step down from the non-token 52px; still reads across the room. Up/Down sub-values text.subtitle (20-ish) mono.

peak read

The day-shape sparkline marks its peak with a dot + guide + peak HH:00 label, and carries 00 / 06 / 12 / 18 / 24 hour ticks — so "the peak was ~19:00" is read, not guessed.

chart.wan / chart.local

WAN/Local stacked bar — two <Border>s, widths bound to proportion. Not a chart.

chart.downSeries

Sparkline stroke; static paint, no tooltip/legend; axis labels chart.axis.label. Theme-repaint via ChartTheming.

Up 220 MB — 4.1x its weekday average.

Risky paths1

updater_x.exe

(unknown) · Unsigned

Unsigned, running from %TEMP%. Contacted 3 WAN endpoints.

TOKEN ANNOTATIONS

- distinct lensTitle, framing copy, and category structure read differently from the Top Apps grid — not "the same list, smaller". NOT byte-rank capped (discovery > ranking, §8.3).
- the "why"Every row carries a one-line reason — the surface's whole job. Reason text is `text.primary`; values inside it `text.mono`.
- category toneNew `status.neutral`, Unusual volume `status.caution`, Risky paths `status.critical` on the category glyph only — not filled rows.
- provisionalInforms `GetDailyReport` fields: per-app rolling median, publisher-first-seen flag, WAN-ratio baseline, path-class.

Notable today Alert-eligible observations for the day. Read-only echo of the Alerts feed.

Critical1

Unsigned binary from a user-writable path

updater_x.exe is unsigned and runs from %TEMP%. It contacted 3 WAN endpoints during the day.

App · updater_x.exe · pid 8841 · 14:22Alerts · #1

Info1

New publisher observed

mssync_helper.exe (Globex Software) made its first WAN connection today.

App · mssync_helper.exe · pid 6610 · 09:14

TOKEN ANNOTATIONS

- severity tokensCritical `status.critical(.background)`, Warning `status.caution(.background/.text)`, Info `status.neutral(.background)` — inherited from the Alerts entity.
- cross-pageThe Critical item carries an "Alerts · #1" reference. Same observation reads as the same on both pages (§16.2). Navigation only — no Acknowledge here.
- items not rowsHeterogeneous payload (severity, title, detail, entity ref, time) → cards, never a DataGrid (§8.2). Scales to future monitor types via severity tag + title + detail.
- priority orderSection headers double as a legend and give Critical-first ordering — calmer than a chronological mix on a summary surface.

On a DataGrid row (hover state shown):

Top apps			ranked by total bytes · top 10	
App	Publisher	Signature	Up	Down
claude.exe	Anthropic, PBC	Signed	142 MB	3.1 GB
msedge.exe	Microsoft Corporation	Signed	88.0 MB	2.2 GB
steam.exe	Valve Corp.	Signed	410 MB	1.1 GB

On a category card (hover state shown):

updater_x.exe

(unknown) · Unsigned

Unsigned, running from %TEMP%. Contacted 3 WAN endpoints.

TOKEN ANNOTATIONS

Single pattern per `feedback_drill_grid_pattern.md`: hover reveals a trailing chevron, the cursor becomes a hand, a single click navigates to History pre-filtered to (app, date). Identical on the grid and the cards so the user never learns two gestures. Presentation-only — no action menu (§13).

Interim placeholder treatment

Ships in the polish-interlude app between now and Phase 5 so Reports doesn't look unfinished beside the four polished screens.
Replaces today's ungrounded PlaceholderPage rendering.

placeholder Daily reports — coming in Phase 5

TOKEN ANNOTATIONS

Centered DocumentText48 at text.tertiary, text.title.large title, text.body.large / text.secondary subtitle. On surface.background — no card.

HTML export composition

The self-contained document the HTML menu item writes — opened in a browser, archived, or pasted into incident docs. Same hierarchy as the in-app surfaces so the user reads them as one artifact. No nav rail, no remote anything.

TOKEN → CSS VARIABLE PROJECTION

<code>surface.card</code>	<code>--surface-card</code> · the document panel; <code>surface.background</code> → <code>--surface-background</code> behind it.
<code>text.* / font.*</code>	<code>--text-primary/secondary/tertiary</code> ; <code>--font-display</code> (Urbanist) body, <code>--font-mono</code> (Overpass Mono) numbers. Font fallback stack inlined.
<code>chart.upSeries / downSeries</code>	<code>--chart-up-series / --chart-down-series</code> on the Up/Down totals; <code>--chart-wan / --chart-local</code> on the proportion bar.
<code>status.*</code>	Notable blocks reuse <code>--status-critical/caution/neutral</code> (+ <code>.background</code>) — same severity mapping as in-app.
<code>self-contained</code>	All CSS inlined; no CDN, no analytics, no remote fonts (zero-own-traffic). Print-friendly for browser save-as-PDF. Target <500 KB.

Hand-off notes · pre-handback confirmation

New tokens introduced — none

Every token referenced exists in `DesignTokens.xml` and `colors_and_type.css` today. Reports is a new page — no legacy XAML to migrate, no pointer renames. (Mock-internal styles reuse the kit's back-compat aliases; the dotted names in every annotation are the contract.)

Variant selection (§8.4) — locked

Q1 → **(c)** narrative. Q2 → **(b)** single day + anchor (Date/7d/30d/90d, default 7d). Q3 → **(b)** headline total + sparkline. Q4 → **(a)** DataGrid. Q5 → **(b)** category cards. Q6 → hover chevron + hand + single click. Q7 → **(a)** severity sections. Q8 → "deliberately quiet" copy. Q9 → single self-contained doc.

New patterns introduced

- **Hero summary strip** — 3-region block: eyebrow + 40px mono headline total with delta, an Up/Down split, a 2-segment WAN/Local bar, and a static day-shape sparkline with peak marker.
- **WAN/Local bar** — two `<Border>` s filled `chart.wan` / `chart.local` , widths bound to proportion. Reusable wherever a 2-way split is shown.
- **Delta chip** — mono, `radius.pill` ; `status.neutral` for more-traffic, `status.success` for less.
- **Category-grouped discovery cards** — glyph + label + count header over reason-led rows; glyph tone carries category severity, rows stay neutral.
- **Severity-section incident card** — 3px left `sevbar` + severity-tinted icon tile + title/detail/entity-ref, grouped under Critical/Warning/Info headers.

Layout & density hints

- `scroll: page` — the whole page scrolls; no surface scrolls independently. Outer margin `space.24` .
- Top Apps grid: `density: compact` (row 22). `MaxHeight` set on Loaded + SizeChanged so the VirtualizingStackPanel virtualizes (NavigationView wraps the page in a scrollviewer).
- Hero / surface loading bodies: `MinHeight ≈ 150` so the centered `ProgressRing` doesn't collapse.
- `NavigationCacheMode.Enabled` — re-measure on `SizeChanged` , not `Loaded` .

Copy strings (painted inline)

- Empty: *"No traffic recorded on Sun, Jun 8 2026."*
- Loading caption: *"Generating report..."*
- Disconnected banner: *"Service disconnected. Last refresh stale."*
- Error banner: *"Report failed: database is locked."* (no em-dash in prose).
- Quiet day: *"Nothing notable today."*. *"A deliberately quiet day. No app strayed from its usual pattern."*

Provisional fields & cross-screen

Contract-side, lock at Phase 5: per-app **rolling median**, **publisher-first-seen** flag, **WAN-ratio baseline**, **path-class**; contract grows to `GetReport(date, anchor)` (Q2). History grows the `(app, date)` filter same sprint (F8). Notable severity-to-token mapping is shared with the Alerts feed — `status.critical` / `status.caution` / `status.neutral` (§16.2).
