

# Per-App — state coverage

The drill surface, upgraded from a functional data grid to a first-class drill surface: compact density, mono digits that column-align, sortable byte columns, a window-totals summary strip, a hover-drill chevron, signature colouring, and explicit loading / empty / disconnected / error states.

density: **compact**

AppsGrid.MaxHeight: **window.ActualHeight - 220**

AppsGrid.MinHeight: **200** (floor)

scroll: **pane** (DataGrid only)

page scroll: **none**

new tokens: **1**

renames: **1**

Overrides to brief — implement the mock

Four design-review changes supersede the brief's §5 / §8 / §16 locks. Where the brief and this mock disagree, **the mock wins**: (1) summary strip → metallic elevated card; (2) eyebrows → brand violet; (3) ImagePath tooltip → contrasting translucent; (4) hover chevron → heavier teal stroke.

One rename (pointer change)

AlternatingRowBackground `SubtleFillColorTertiaryBrush` → `surface.subtle.alt`. Not a new token.

Pattern · hover-drill chevron (revised)

Trailing heavier (2.75) stroke chevron (Path, not the thin Fluent glyph) in brand teal `chart.downSeries ; Hidden → Visible` on row `IsMouseOver`. Drill-only affordance. Supersedes the brief §16.2 `text.tertiary` treatment.

Discovery > ranking

List is uncapped server-side; the client filter narrows by typed substring, never by score.

No warming state

Per-App queries SQLite via HistoryQueryClient, not the in-memory aggregate — there is no fill window.

One new token

`surface.tooltip.scrim` = `text.primary @ 84%` + 4px blur (text on it = `surface.card`). Theme-flips automatically. Rationale: contrasting, translucent tooltip so the hovered cell stays readable beneath — replaces the brief's opaque `surface.layer` tooltip.

Pattern · summary strip (revised)

3-cell horizontal block — uppercase `accent.text` eyebrow above a `text.mono` value — on a **metallic elevated card** ( `metal.card` + `edge.Light` + `shadow.sm` , `radius.md` ). Supersedes the brief §16.1 understated shape; History should adopt *this* revision.

Passive-only (invariant)

No block / kill / quarantine. The hover chevron is a **drill** affordance, not an action.

Sort fix

Up / Down carry `SortMemberPath=BytesUp/BytesDown` so byte columns sort numerically, not lexically.
